Learning Objectives

• Differentiate between anger and aggression.

• Describe the prevalence of anger-related problems in Veterans and Service Members.

• Identify assessment and treatment strategies for problematic anger.

Outline

• Definition of anger and aggression

• Description of problems related to anger in Service members and Veterans

• Prevalence of anger-related problems in Service members and Veterans

• Assessment and treatment of problematic anger
Anger and Aggression

Anger

“A strong feeling of being upset or annoyed because of something wrong or bad; the feeling that makes someone want to hurt other people, to shout, etc.; the feeling of being angry.”

“A strong feeling of annoyance, displeasure, or hostility.”
**Aggression**

“Hostile or violent behavior or attitudes toward another; readiness to attack or confront.”

“A forceful action or procedure (as an unprovoked attack) especially when intended to dominate or master; hostile, injurious, or destructive behavior or outlook especially when caused by frustration.”

**Construct of Anger**

- Cognitions
- Physiological Changes
- Arousal/Affective States
- Behavior
- Coping Behaviors

Eckhardt et al. (2004); Taft et al (2012)
Construct of Anger

Emotion that involves
- Cognitive appraisal
- Action tendency

Anger, Physical Aggression, and Violence
Dichotomy of Anger

**State Anger**
- Emotional state
- Feelings vary in intensity
- From mild annoyance or irritation to intense fury or rage

**Trait Anger**
- Chronic individual differences in the frequency, intensity, and duration of state anger episodes

Integrative Cognitive Model

- Hostile Interpretation
- Ruminative Attention
- Effortful Control

Spilberger (1988)

Wilkowski & Robinson (2010)
Trichotomy of Anger

- Emotion
  - Episodic
  - Varying intensity
- Mood
  - Relatively prolonged
  - Generally less intense
- Temperament
  - Recurrent
  - Pervasive

Fernandez (2013)
Problematic Anger

• Use of DSM-V Definitions
  • Dysfunctional or maladaptive
  • Intermittent Explosive Disorder

• Stimulus-Response Perspective
  • Weighing the response against the stimulus
  • Over-reaction vs. under-reaction

Possible Consequences of Problematic Anger

• Interpersonal conflict
  • Family environment
  • Work environment
  • Psychotherapy

• Impaired judgement
  • Increased risk-taking

• Physical health risks
  • Hypertension
  • Arteriosclerosis
Case Example

- 35 year-old male Veteran
- Medically discharged from U.S. Army in 2012
- Two deployments but never outside the wire
- Attending local university
- Encouraged to seek therapy by academic counselor
- Motivation for treatment is low
- Prefers to seek treatment in community

Problems Related to Anger and Aggression in Service Members and Veterans
**Prevalence of Anger Problems**

- Challenges in obtaining accurate understanding as to the scope of the problem
  - Conceptualization
  - Measurement
  - Sampling

Worthen et al. (2014); Fernandez (2013)

---

**Prevalence of Anger Problems**

- Population based estimates
- Variability in measurement
- Among post-9/11 veterans, the estimates range from 32% to 57%
- Prevalence of problems related to anger appears to be similar among men and women

Pew Research Center (2011); Sayer et al. (2010); Wheeler (2007); Worthen et al. (2014)
Vulnerability of National Guard vs. Active Duty Soldiers (OIF)

- PTSD and depression significantly increased from the 3 to 12-month time points for both National Guard and Active Duty
- Magnitude of increase was greater for National Guard than Active Duty
- Among National Guard functional impairment and either alcohol misuse or aggressive behaviors between 3 and 12 months increased significantly
- Among Active Duty alcohol misuse and aggressive behaviors did not change significantly

What Contributes to Anger-Related Problems?

- Factors contributing to anger problems reported by OEF/OIF Veterans:
  - Most problems directly followed separation from military
  - Loss of structure
  - PTSD
  - Moral injury
- Increased social isolation for women experiencing problems with anger
What Contributes to Anger-Related Problems?

- Factors associated with higher prevalence of anger problems reported by veterans:
  - Conditions associated with anger
  - Combat exposure
  - Deployment to Iraq
  - Pre-deployment functional impairment
  - Lower education level
  - Less unit cohesion
  - Lower rank
  - Physical or sexual abuse history

Post-Deployment Aggression and Violence in OEF/OIF Veterans

- Estimates during the prior month for:
  - Physical assault 10%
  - All types of physical aggression 29%
  - Combat exposure associated with post-deployment physical aggression and violence
  - Risk of violence increased with greater intensity and frequency of combat exposure
  - Limitations included neglect of pre-military violence risk
  - Symptoms of PTSD relate differently to behavior
  - Alcohol misuse strongly associated with aggression
**Anger and PTSD**

- Traumatic experience leads to rapid escalation of threat perception, transforms anger rapidly, and results in near automatic action.

**PTSD, Anger and Aggression**

- Possible reasons for increased problems with anger and aggression in Veterans with PTSD
  - Information processing deficits
  - Heightened threat perception
  - Co-morbid depression, alcohol use problems, and TBI
  - Trust
  - Shame and guilt
  - Powerlessness
**PTSD and Aggression**

- For both men and women, emotion dysregulation fully accounted for relationship between PTSD and impulsive aggression
- Difficulty distinguishing between safe vs. potentially unsafe individuals and environmental cues
- PTSD interventions may be augmented with emotion regulation skills training

**Coping: PTSD and Anger**

- Cognitive and behavioral efforts in response to stressor that is perceived as exceeding resources
- Multidimensional with three overlapping conceptual approaches to classification:
  - Orientation
  - Method
  - Focus
Assessment of Anger in Service Members and Veterans
Motivation for Treatment

- Relationships
  - Family
  - Friends
  - Coworkers/Supervisors
- Health
- Legal

Assessment Measures

- State-Trait Anger Expression Inventory-2 (STAXI-2)
- Novaco Anger Scale and Provocation Inventory (NASPI)
- Anger Disorders Scale (ADS)
- Aggression Questionnaire (AQ)
- Revised Conflict Tactics Scales (CTS-2)

Fernandez (2013); Taft et al. (2012)
Assessment Recommendations

- Use direct and non-judgmental approach
- Discuss limits of confidentiality
- Begin with presenting problem
- Inquire explicitly regarding anger-related problems
- Indicate frequency, duration, and intensity of anger
- Assess aggression
- Conduct interview with collateral source(s)
- Perform safety assessment

Violence Risk Assessment

Violence Risk Assessment:

Static Factors
- Dispositional
- Historical

Dynamic Factors
- Clinical
- Contextual

*Elbogen et al. (2010)
Prototype of Checklist for Assessing Violence Risk Among Veterans

| Look at static factors empirically related to violent behavior (e.g., demographics, traits, and history) |
|---|---|
| **Veteran-specific** | **General population** |
| Younger Age (<40) | Male |
| Victimization/abuse as a child | Age of onset of violence (<12) |
| Past violence/aggression | Criminal arrests for violence |
| Exposed to combat during service | Psychopathic traits |

| Adjust risk estimate by considering current dynamic, individual-level variables (e.g., clinical diagnosis) |
|---|---|
| **Veteran-specific** | **General population** |
| Meets criteria for PTSD | Personality disorder |
| High PTSD symptom severity | Current violent thoughts |
| Substance abuse | Anger problems |
| Depression | Acute psychotic or manic symptoms |

| Examine dynamic protective or risk factors currently in the Veteran’s environment (e.g., life situation) |
|---|---|
| **Veteran-specific** | **General population** |
| Current employment | Living stability |
| Financial stability/debt | Engaged in mental health treatment |

Elbogen et al. (2010)

---

Anger Management Techniques and Treatments for Service Members and Veterans
Anger Management Techniques and Treatments

- Group vs. Individual
- Research on effectiveness of treatments
- Cognitive-behavioral techniques
  - Challenging anger-related thoughts
  - Relaxation skills
  - Effective communication
  - Coping strategies
- Process and motivational issues
  - Conveying sense of hopefulness and optimism

PTSD Treatment and Comorbid Symptoms

- Reduction in depression symptoms, general anxiety, and psychotic prone thinking
- Reduction on suicidal ideation (not after controlling for depression and hopelessness)
- Decrease in trauma related anger
Anger Management for Substance Abuse and Mental Health Clients (SAMHSA, 2002)

- Developed for use at San Francisco VA Medical Center and San Francisco General Hospital
- Combined CBT approach
- Developed for groups; twelve 90-minute sessions
- Ideal number of participants is eight
- VTC as effective as live group
- Conducive for individual therapy
- At least 2 weeks of abstinence recommended

Reilly et al. (2002); Morland et al. (2010)

Anger Management for Substance Abuse and Mental Health Clients (SAMHSA, 2002)

- Psychoeducation and Anger Meter
- Check-in Procedures
- Anger Control Plan
- Deep Breathing
- Aggression Cycle
- Progressive Muscle Relaxation
- ABCD Model
- Thought Stopping
- Assertiveness Training and Conflict Resolution

Reilly et al. (2002)

CDP Website: deploymentpsych.org

- Descriptions and schedules of upcoming training events
- Blog updated daily with a range of relevant content
- Articles by subject matter experts related to deployment psychology, including PTSD, mTBI, depression, and insomnia
- Other resources and information for behavioral health providers
- Links to CDP’s Facebook page and Twitter feed
Online Learning

http://www.deploymentpsych.org/content/online-courses

NOTE: All of these courses can be taken for free, or for CE Credits for a fee

- Cognitive Processing Therapy (CPT) for PTSD in Veterans and Military Personnel (1.25 CEs)
- Prolonged Exposure Therapy for PTSD in Veterans and Military Personnel (1.25 CEs)
- Epidemiology of PTSD in Veterans: Working with Service Members and Veterans with PTSD (1.5 CEs)
- Provider Resiliency and Self-Care: An Ethical Issue (1 CE)
- Military Cultural Competence (1.25 CEs)
- The Impact of Deployment and Combat Stress on Families and Children, Pt 1 (2.25 CEs)
- The Impact of Deployment and Combat Stress on Families and Children, Part 2 (1.75 CEs)
- The Fundamentals of Traumatic Brain Injury (TBI) (1.5 CEs)
- Identification, Prevention, & Treatment of Suicidal Behavior in Service Members & Veterans (2.25 CEs)
- Depression in Service Members and Veterans (1.25 CEs)

All of these courses and several others are contained in the Serving Our Veterans Behavioral Health Certificate program, which also includes 20+ hours of Continuing Education Credits for $350.

Provider Support

CDP’s “Provider Portal” is exclusively for individuals trained by CDP in evidence-based psychotherapies (e.g., CPT, PE, and CBT-I)

- Consultation message boards
- Hosted consultation calls
- Printable fact sheets, manuals, handouts, and other materials
- FAQs and 1:1 interaction with answers from SMEs
- Videos, webinars, and other multimedia training aids

Participants in CDP’s evidence-based training will automatically receive an email instructing them how to activate their user name and access the “Provider Portal” section at Deploymentpsych.org.
